

DECALS AVAILABLE

Subject

Decals for many 1984, 1985, 1986 and 1987 models are available. These decals are for fuel tanks, fairings, side covers, and seat covers (tail pieces). Not all applications are covered. 1988 and later model decals are on individual parts microfiche. Prior years' decals will not be added to microfiche. Keep this bulletin for reference.

Decal Replacement Procedure

This procedure covers decal replacement on models with a clear-coated paint job. It will ensure that the repaired part looks as near new as possible. There are easier ways to apply decals, but none will produce equal results.

Old Decal Removal

NOTE:

- o All the decals on a part must be removed even if only one is damaged, because the part must be completely repainted before installing the new decals.
- Remove all the old decals on the part with sandpaper. If working by hand, use #220. For power sanding, use #320.
- Remove any adhesive under the old decals with an oilless cleaning fluid such as acetone or lacquer thinner.

▲ WARNING

These cleaning fluids are usually highly flammable and harmful if breathed for long periods. Be sure to heed the fluid manufacturer's warnings.

NOTE:

- o These fluids will not dissolve the adhesives, but they will soften them or the paint under them enough to allow easy removal.

- Sand the areas where the decals were removed with progressively finer sandpaper, finishing by hand with #400 used wet.
- Wet sand the entire part with #400 sandpaper, so that the new paint will adhere to the old.

Repainting

NOTE:

- Detailed painting instructions are beyond the scope of this bulletin. We suggest that any painting be done by an experienced, professional automotive painter.
- Be sure to use a gasoline resistant clear coat, especially on the fuel tank. It is recommended that the same kind of paint be used for all repainting on a single unit to insure a good color match.
- Kawasaki does not offer all colors of paint used on Kawasaki products, nor can we guarantee perfect color matching on paint offered. The color of applied paint varies with application procedure, age, exposure to the sun and weather, and other factors obviously beyond the control of any manufacturer.
- If there are any areas on the part where the paint has been removed completely, exposing the metal or plastic, prime the entire part. Follow the paint manufacturer's instructions for surface preparation, and paint mixing and application exactly.
- Next, paint the part with the desired color coat, again following the manufacturer's instructions.

NOTE:

- Lacquer can be used for the color coats. Use a urethane enamel or catalyzed resin clear coat over it after decal installation.

Applying New Decals

- Allow the color coat to cure completely before applying the new decals.

NOTE:

- If the paint is not completely cured, bubbles will form in the decal, lifting it away from the surface.
- Decide where each decal should go. Trial fit each one with the backing and overlay sheets still in place.
- Peel the backing off the decal (but not the overlay sheet), exposing the adhesive. Wet the adhesive with soapy water.
- Wet the part with soapy water also.

- Lay the decal in place on the part. The soapy water will let you slide the decal around into the correct position.
- Starting at one end of the decal, use an artist's squeegee to force the water out and stick the decal to the part. Work carefully toward the other end of the decal, making sure there are no wrinkles or bubbles under the decal. The soapy water also helps with this.
- When all decals are completely stuck in place, rinse the soapy water off with clear water, dry the part, and then peel the overlay sheets off the decals.

Clear Coating

- Following the manufacturer's instructions, apply a clear coat over the entire part, decals and all.

▲ CAUTION

If heat is used to dry the clear coat, limit temperature to 150°C. Higher temperatures will damage the decals.
